

# API Overview

**ISTQB-Based Test Automation Planning API** with AI Plan your automated testing strategies with the power of Artificial Intelligence. This API leverages AI to generate optimized test plans based on ISTQB standards and user-provided data, accelerating your QA process with precision and intelligence. Ideal for QA engineers, developers, and testing teams aiming for smarter and faster automation planning.

## Key Features:

 AI-generated test automation plans based on ISTQB principles.

 Designed for QA engineers, testers, and DevOps teams.

 Rapid integration for agile

This API provides a structured and professional approach to planning functional automated tests, aligned with ISTQB best practices. It's ideal for QA engineers, test automation developers, and team leads who need to organize, document, and execute test plans across multiple companies and user environments.

 Google Sign-In authentication

 Multi-tenant company management

 User-company relationships with assignable roles

 ISTQB-style end-to-end test planning

 Support for preconditions, test data, steps, acceptance criteria, expected results, and more

 Optimized for modern test frameworks like Cypress + Cucumber

 Secure, structured, and standards-compliant

 Test environments, priorities, pipelines, and traceability included

📖 Ideal Use Cases: QA teams planning automation in a structured, standards-based way

SaaS platforms managing tests for multiple client companies

QA consultants offering certified test planning services

---

🔗 Available Endpoints:

Endpoint Description

1. POST /auth/google-signin

Authenticate a user via Google

2. POST /companies

Register a new company and associate it with the user

3. POST /companies/relate-user

Relate an authenticated user to a company

4. GET /companies

Retrieve companies associated with the user

5. POST /workflow/planeador\_de\_automatizacion\_ISTQB

Create a test plan following ISTQB structure

6. GET

/workflow/planeador\_de\_automatizacion\_ISTQB/getExercisesInTestAutomationPlan  
ById

List user's ISTQB-style test plans

7. GET /workflow/planeador\_de\_automatizacion\_ISTQB/verifyExercisesInPath

Retrieve a specific test plan by ID

---

## **Tech & Best Practices:**

Node.js, Express

MongoDB (multi-tenant schema)

UUIDs for secure and unique identification

Clear separation of concerns between users, companies, and test flows

Follows the full test lifecycle as recommended by ISTQB
